The project that we choose was to create a web page for a non-for profit organization. This organization name is Our Lady of Assumption Catholic School. We as a group work efficiently since the beginning of the project. We made webpage’s pert chart and we follow the planned schedule. We all participate in the web page design and implementation. We developed interviews, where all of us attended and participated. Also we all got together several times to discuss and design the web page. We all contribute in the elaboration of this wonderfull and successfully project.

Our team was very pleased to implement what we learned in class. This was a fun project, where we learned systems analysis and design, by applying them to the real world. It was a very good experience to involve the community with technology and to do it at the same time we learned. We are satisfied with the web page design and the followed process. We believed that is very significant that non for profit organizations know about the services that UTEP students, under Professor Kesh supervision, provide at no cost to the cities of El Paso and, Juarez.

For us it was amazing to learn something in class, and then the next day got together in group and implemented in the real world what we knew in theory by the professor’s lessons.

Professor Kesh, thank you very much for giving us the opportunity to help the community, and gain real world experience, at the same time we develop our professional and business skills.
